

ii. MOLAR BALANCES

- ANOTHER WAY TO QUANTIFY "MATERIAL". ONLY PRACTICAL IF CHEMICAL IDENTITY OF MATERIAL IS KNOWN.
- IN CONTRAST TO MASS, THE TOTAL NUMBER OF MOLES CAN CHANGE. THEREFORE FOR BOTH A SPECIES BALANCE & THE OVERALL BALANCE THERE IS A GENERATION TERM

$$\begin{array}{l} \text{OVERALL} \\ \text{ACC MOLES} \\ \text{IN SYSTEM} \end{array} = \begin{array}{l} \text{MOLES} \\ \text{INTO} \\ \text{SYSTEM} \end{array} - \begin{array}{l} \text{MOLES} \\ \text{OUT OF} \\ \text{SYSTEM} \end{array} + \begin{array}{l} \text{MOLES} \\ \text{GENERATED} \\ \text{IN SYSTEM} \end{array}$$

$$\begin{array}{l} \text{SPECIES} \\ \text{ACC MOLES} \\ \text{OF SPECIES} \\ \text{IN SYSTEM} \end{array} = \begin{array}{l} \text{MOLES} \\ \text{OF SPECIES} \\ \text{INTO} \\ \text{SYSTEM} \end{array} - \begin{array}{l} \text{MOLES} \\ \text{OF SPECIES} \\ \text{OUT OF} \\ \text{SYSTEM} \end{array} + \begin{array}{l} \text{MOLES} \\ \text{OF SPECIES} \\ \text{GENERATED} \\ \text{IN SYSTEM} \end{array}$$

ILLUSTRATION THAT MOLES MAY BE GENERATED OR CONSUMED:

iii. ATOMIC BALANCES

- REFERS TO A BALANCE OF 1 ELEMENT WITHIN ALL COMPONENTS IN THE SYSTEM
- REALLY ANOTHER TYPE OF SPECIES BALANCE. WE ARE ABLE TO CONCEPTUALIZE & DISTINGUISH A UNIT SMALLER THAN A MOLECULE.

ATOMIC

$$\text{ATOM ACC} = \text{ATOM IN} - \text{ATOM OUT}$$

EXAMPLE 3

2710g OF WOOD COMPOSED OF 38.1% CARBON BY MASS IS BURNED IN A FIREPLACE YIELDING 113g OF ASH CONTAINING 82.4% CARBON. 2930g CO₂ IS COLLECTED FROM FIREPLACE. IF ALL THE REMAINING CARBON EXITS AS CO, HOW MUCH CO ENTERS ENVIRONMENT?

CARBON BALANCE

$$ACC = \overset{\checkmark}{IN} - \overset{\checkmark}{OUT_{CO_2}} - \boxed{OUT_{CO}}$$

$$ACC = \underset{\text{SYSTEM}}{\text{FINAL STATE IN}} - \underset{\text{SYSTEM}}{\text{INITIAL STATE IN}}$$

$$ACC = (113g)(0.824) - (2710g)(0.381)$$

$$ACC = -939.4g$$

$$I_N = 0$$

$$OUT_{CO_2} = ?$$

$$\begin{array}{r} 2930g \text{ CO}_2 \\ 1 \text{ mol CO}_2 \end{array}$$

$$\begin{array}{r} 12.0g \text{ C} \\ 32.0g \text{ O} \\ \hline \end{array}$$

$$44.0g \text{ TOTAL}$$

$$\text{MASS FRACTION OF C IN CO}_2 = \frac{12}{44} = 0.273$$

$$OUT_{CO_2} = (2930g)(0.273) = 799.0g$$

$$-939.4g = 0 - 799.0 - OUT_{CO}$$

$$OUT_{CO} = 140.4g \text{ C}$$

!!

$$1 \text{ mol CO} = 12.0 \text{ g}$$

$$\underline{16.0 \text{ g}}$$

$$28.0 \text{ g TOTAL}$$

$$\text{MASS FRACTION OF C IN CO IS } \frac{12}{28} = 0.429$$

$$140.4 \text{ g} = (0.429) M_{\text{CO}}^{\text{OUT}}$$

$$\underline{M_{\text{CO}}^{\text{OUT}} = 327.3 \text{ g}}$$

iv. MATHEMATICAL EXPRESSIONS

LET $\dot{m}_i$ = MASS FLOWRATE OF SPECIES i
(MASS/TIME)

Q = VOLUMETRIC FLOWRATE (VOLUME/TIME)

ρ_i = MASS CONC. OF SPECIES i
 $= \dot{m}_i / Q$

r_i = RATE OF MASS OF SPECIES i GENERATED
 $\dot{n}_i$ = MOLAR FLOWRATE OF SPECIES i (MOLES/TIME)

c_i = MOLAR CONC. OF SPECIES i
 $= \dot{n}_i / Q$

R_i = RATE OF MOLES OF SPECIES i GENERATED

MASS

RARELY
USED.

MOLES

COMMONLY
USED

EXAMPLES

FOR A (MASS) SPECIES BALANCE

$$\begin{array}{ccccccc} \text{RATE} & & \text{RATE} & & \text{RATE} & & \text{RATE} \\ \text{OF} & - & \text{IN} & - & \text{OUT} & + & \text{GEN} \\ \text{ACC} & & & & & & \end{array}$$

$$\text{RATE OF ACC} = \frac{dm_i}{dt}$$

$$\text{RATE IN} = \dot{m}_i^{IN,1} + \dot{m}_i^{IN,2} + \dot{m}_i^{IN,3} + \dots$$

(Note: In the original image, 'IN,3' is circled in blue and 'i' is circled in green. A blue arrow points to 'IN,3' with the text 'SUPERSCRIPT INDICATES NAME OF STREAM'. A green arrow points to 'i' with the text 'SPECIES'.)

$$\text{RATE OUT} = \dot{m}_i^{OUT,1} + \dot{m}_i^{OUT,2} + \dot{m}_i^{OUT,3} + \dots$$

$$\text{RATE GEN} = V r_i$$

SHORTHAND:

$$\frac{dm_i}{dt} = \sum_{IN} \dot{m}_i - \sum_{OUT} \dot{m}_i + V r_i$$

NOTES:

- ① "ACCUM" & "GEN" TERMS DESCRIBE WHAT'S GOING ON INSIDE SYSTEM.
- ② EACH TERM HAS UNITS OF "MASS/TIME"
- ③ $\dot{m}_i$ AND m_i REFER TO DIFFERENT QUANTITIES

SORRY {

m_i - THE MASS OF A SPECIES INSIDE SYSTEM
 $\dot{m}_i$ - THE MASS FLOWRATE OF A SPECIES INTO SYSTEM

ANOTHER WAY TO WRITE SAME BALANCE..

$$\dot{m}_i = Q p_i$$

$$m_i = V p_i$$

$$\frac{d[V p_i]}{dt} = \sum_{in} (Q p_i) - \sum_{out} (Q p_i) + V r_i$$
